

From concrete to websites

The portfolio site of freelance web developer Gábor Mászalai (Hajdúszoboszló) — with a construction background. A one-page, view-based static site: services, work, prices and contact, in two languages.

Overview

MaszlaG is the portfolio and lead-generation site of freelance web developer Gábor Mászlai. A one-page, view-based static website: no server, opens in any browser, uploadable to any host.

The through-line is the construction background: "I used to build with concrete, now with websites." The site's goal is to turn a visitor into a client — with clear services, references, prices and a direct order form.

Fully bilingual (Hungarian/English), mobile-first responsive, no build step and no framework.

Goals & audience

Audience Small and medium businesses and service providers who need a fast, flawless-on-mobile website or web app.	Goal Trust-building and lead generation: the visitor sees the work, the prices, and can start an order in one click.
--	--

The first consultation is free; the site guides the visitor toward contact and ordering.

Sections & content

SECTION	CONTENT
Hero	The core message ("concrete → websites"), CTA buttons, quick facts.
About	The background and mindset: the foundation decides everything.
Services	What's offered — websites, web apps, frontend.
Work	Selected projects, each with a case study.
Prices	Indicative starting prices, "from" logic.
Contact	Contact details + embedded order form.

Portfolio

The "Work" section shows selected projects, each with a detailed case study: description, tech, and light + dark screenshots in a lightbox gallery.

The featured projects are the developer's own work: Crestly (net-worth tracker), Kvitli (business manager), Slotli (appointment booker), B&D Hairstudio and Panetti Photography (presentation sites).

The gallery shows the light screenshots by default; a toggle switches to dark.

Embedded form

A live Kvitli order form is embedded in the contact section. The visitor can start an order straight from the page; the submission lands in the Kvitli account's `inbox`, and the service list is read from the Kvitli `form_configs` document.

Confirmation e-mails are sent via EmailJS. So even a static page provides full order intake, with no backend to run.

Architecture & tech

Client

Vanilla HTML/CSS/JS, a single page with several "views", smooth in-page navigation and scroll-based animations.

External service

The embedded Kvitli form (Firebase) + EmailJS for orders; otherwise no backend.

Google Fonts (Fraunces, Inter, JetBrains Mono); everything else is local, no build step.

Bilingual & SEO

The site is fully bilingual: a HU/EN toggle switches all text (via `data-i18n` attributes), and the language choice is remembered.

SEO: descriptive title/description, a canonical URL, Open Graph and Twitter cards, and `JSON-LD` structured data (`ProfessionalService`) for better search appearance.

Appearance & motion

A "MG/" intro splash greets the visitor: the logo's lines draw themselves, then the whole thing gently dissolves into the content (once per session).

Content appears on scroll (reveal), and a thin progress bar under the header shows the position. All animation respects the `prefers-reduced-motion` setting.

Design system

A warm, crafted "Studio" identity — a paper (cream) base, clay (terracotta) primary and sage accent, with classic serif headings.

COLOUR PALETTE

	Clay (primary)	#b45a34
	Sage (accent)	#6f7a5a
	Paper (base)	#f4efe6
	Paper 2	#ece5d8
	Ink	#26221c
	Line	#d8cfbe

Heading Fraunces · serif	Body Inter	Label / mono JetBrains Mono
------------------------------------	----------------------	---------------------------------------

Components: clay accent on buttons and links, thin rules, cards on the paper surface; the strike-through on "concrete" is a visual element of the narrative.

File structure

```
01_MaszlaG/  
├─ index.html          - the full UI (with views)  
├─ css/style.css  
├─ js/script.js        - i18n, views, animations, form  
├─ kepek/  
└─ dokumentumok/      - screenshots, OG image  
                        - design doc, price list (PDF)
```

Publishing

- Upload the folder to static hosting (GitHub Pages, Netlify, Cloudflare Pages).
- Set the correct OWNER_UID for the embedded Kvitli form.
- Connect a custom domain (e.g. maszlaigabor.hu).

Future work

- Blog / case-study articles for SEO.
- A client testimonials section.
- More projects and a growing portfolio.

Thanks to the framework-free structure, extensions can be added gradually without disrupting operation.
